

Environmental policy

Euromed, S.A. carries out its activity respecting the community and the environment in which it operates. Therefore, based on the requirements of the ISO 14001:2015 standard, we have implemented an environmental management system defined by our environmental policy, which includes the following commitments:

- Determine environmental objectives for continuous improvement in the development of activities.
- Raise the awareness of all employees, through training and information programmes, to instil good environmental practices in their work activities.
- Implement a circular economy model in the management of our waste, allowing it to be reused as raw material and reducing its environmental impact.
- Promote environmentally friendly attitudes and mechanisms in the development of our activities to reduce environmental impact and prevent pollution.
- Sustainable and controlled use of energy resources and raw materials under environmental sustainability criteria.
- Manage the risks and impacts of our manufacturing processes, transport and other activities to reduce greenhouse gases and therefore our carbon footprint.
- Use water rationally and ensure that it is returned to the environment in appropriate conditions.
- Identify and comply with applicable legislation and environmental standards.
- Ensure the conservation of natural biodiversity and of the species existing in the area surrounding the activity.

All members of Euromed, S.A. are aware of this environmental policy and assume the commitments established and the responsibility to put them into practice in their activities.

Xavier Roig Almirall
